EDUCATION

California State University, Northridge

Bachelor of Science in Computer Science

Los Angeles, CA

Aug. 2020 – May 2025

EXPERIENCE

Audio & Visual Contractor

Sep. 2025 – Present

Temple Israel of Hollywood

Los Angeles, CA

- Managed live production setups using multi-camera systems, OBS Studio, and audio mixers, ensuring smooth livestreams for weekly ceremonies.
- Diagnosed and resolved real-time AV signal and bandwidth issues, improving reliability for 100+ live viewers.

PROJECTS

QA Automation Suite | *Python*

Jan 2025 – May 2025

- Developed a **Python-based automation pipeline** that simulated **Global App Testing workflows**, improving test coverage and reliability across 100+ QA cases.
- Automated log parsing and metadata extraction to create structured QA reports, **reducing manual review effort by 70%**.
- Standardized QA tracking formats to unify test output and enhance bug traceability across development teams.

Baselight Marks Tool | *Python*

Jan 2025 – May 2025

- Engineered a tool to **parse Baselight EDL metadata** and extract frame-level shot ranges for editorial pipelines.
- Automated XLS report generation and **Vimeo thumbnail previews**, reducing editorial lookup time by **50%**.
- Optimized post-production communication by centralizing visual reference data into shareable formats.

VFX Toolchain CLI | *Python, FFmpeg*

Jan 2025 – May 2025

- Built a **modular command-line utility** for **proxy creation, watermarking, and GIF generation**, automating repetitive VFX review tasks.
- Reduced asset preparation time by **60%** through batch processing and reusable function design.
- Packaged the tool as a portable module to be reused across multiple post-production environments.

Sports Management Database | *SQL, ER Modeling, Relational Schema, Queries* August 2024 – December 2024

- Designed and implemented a **relational database system** for tracking athletes, teams, and game stats using **SQL**.
- Normalized schemas and built **ER diagrams** to ensure optimized data storage and referential integrity.
- Wrote complex **queries and joins** to generate player performance insights and team comparisons.
- Streamlined data access and analysis workflows for sports management applications.

Blockchain-Based Medical Consultation System | *Java, Cryptography, Data Integrity*

Aug 2022 – Dec 2022

- Designed and implemented a **Java-based blockchain ledger** to securely store and validate medical consultation records with **immutable data guarantees**.
- Engineered custom **block and chain validation logic** using cryptographic hashing (SHA-256) to detect tampering and ensure end-to-end data integrity.
- Modeled structured medical consultation data within blockchain blocks, enforcing **auditability and trust without centralized storage**.
- Applied **object-oriented design principles** to separate blockchain mechanics, validation logic, and domain-specific medical data models.
- Demonstrated secure system design patterns relevant to **healthcare data workflows, backend services, and distributed systems**.

TECHNICAL SKILLS

Languages: Python, C#, JavaScript, SQL, Lua

Tools: Unity, Firebase, FFmpeg, OBS Studio, Git, GitHub, Jira, Blender

Libraries: pdfplumber, pandas, xlswriter, argparse

Frameworks: AR Foundation, Flask, React

APIs: Google Maps API, Google Sheets API, Vimeo API

Design: Figma, Wireframing, A/B Testing, Heuristic Evaluation, UI/UX Prototyping
